MORE than two years ago I commenced to handle the Corbin Disk Harrow and in connection with my first announcement published testimonals as to its value as a farming implement from several of the best farmers in York county. Their statements struck a great many of the farmers who had never used the Corbin Harrow as being absurd, and for the first twelve months my sales were few and far between. not months my sales were few and far between, no RICHMOND AND DANVILLE R. R. CO., paying expenses of the business. The next season my sales were more than three times as SOUTH CAROLINA DIVISION, great as the first season, and the sales for the present season, judging by the number of sales since October 1, bid fair to exceed the sales of last sea-

SAM M. GRIST, Yorkville, S. C.: Dear Sir:—I have owned a 16-inch Corbin Disk Harrow for the past four years and have put it to every possible test and it has given entire satisfaction. I had long felt the need of a harrow that would pulverize the soil thoroughly from four to six inches deep, and realized that this could not be done by any drag or tooth harrow, for they only pulverize the surface, leaving many clods or lumps untouched, and these clods would be worked to the surface in cultivating the crop; and all intelligent farmers know that cloddy land does not give the best results. Hence the great importance of a Harrow that will pulverize the soil as deep as the plow goes. My Harrow will thoroughly pulverize to a depth of seven inches. I want nothing better in stalk land in putting in wheat or oats than the Corbin Harrow, for it not only does better work than a plow, but it is so much faster, cutting six feet at a time, and all farmers know the importance of saving time at the season when these crops are usually sown. I venture the assertion that no farmer who owns a Corbin Harrow would be without it for twice its cost. Two great advantages the harrow possesses over most improved farmier implements is its simplicity and durability.

The best prepared land I have ever had was a plece of weed stubble turned in the fall and cut up with the Corbin Harrow in the spring.

In conclusion, let me say that the Harrow thoroughly breaks and pulverizes the land and leaves it in a porous condition. Land that has been pulverized with a Corbin Harrow will not bake.

The Best Bargain Ever Offered in Sewing Machines. A \$45\overline{90} SEWING MACHINE FOR \$16\overline{90},

WE have made such arrangements as enable us to offer the CHICAGO SINGER SEWING MACHINES at lower rates than ever before for a GOOD MACHINE, and we offer our readers the advantage of the unprecedented bargains.

This Machine is made after the latest models of the Singer Machines, and is a perfect facsimile in shape, ornamentation and appearance. All the parts are made to gauge exactly the same as the Singer, and are constructed of precisely the same materials.

The utmost care is exercised in the selection of the materials used, and only the very best quality is purchased. Each Machine is thoroughly wellmade and is fitted with the utmost nicety and exactness, and no Machine is permitted by the inspector to go out of the shops until it has been fully tested and proved to do perfect work, and run light and without noise.

THE CHICAGO SINGER MACHINE has a very important improvement in a Loose Balance Wheel, so constructed as to permit winding bobbins without removing the work from the Machine.

Machine.

The Loose Balance Wheel is actuated by a solid bolt passing through a collar securely pinned to the shaft outside of the balance wheel, which bolt is firmly held to position by a strong spiral spring. When a bobbin is to be wound, the bolt is pulled out far enough to release the balance wheel, and turned slightly to the right or left, where it is held by a stop-pin until the bobbin is filled. Where the Machine is liable to be meddled with by children, the bolt can be left out of the wheel when not in use, so that the Machine cannot be operated by the treadle.

The thread eyelet and the needle clamp are made SELF-THREADING, which is a very great convenience.

Each Machine Is Furnished With the Following Attachments:

6 Hemmers, all different widths,
